

Drops of Love

THERE'S A LOT OF LOVE IN THESE LITTLE BOTTLES!

Anyone who has ever experienced Young Living® oils firsthand knows just how amazing they are. Here is some of what it takes to make these DROPS of LOVE so special... Young Living® puts a great deal of care into each bottle.

SOIL | IT ALL BEGINS WITH THE PERFECT LOCATION...

- Controlling & documenting soil health
- Proper composting & Crop rotation
- Use of natural fertilizers
- No use of Toxic Pesticides ever [even if the property was recently purchased]

SEED | QUALITY BEGINS HERE...

- Botanists, agronomists, and scientists team up to correctly identify the plant species that will ensure the greatest essential oil benefits as documented throughout history and decades of scientific research.

CULTIVATION | NUTURING = LOVE...

- No chemicals of any kind are ever sprayed on Young Living® plants. Our own peppermint oil is used as a natural pesticide.
- Partner farms, co-op, and vendor farms are visited frequently to document and ensure best practices are followed.

HARVEST | EVERY DETAIL COUNTS...

- Plants are only picked at their peak to achieve the greatest essential oil benefit.
- Pertinent details are collected and documented during every step of the process.
- Young Living® will never harvest early because an oil is out of stock. It's worth the wait too!

DISTILLATION | DROPS OF LOVE...

- Young Living® distilleries only use stainless steel and glass material for the distillation vats, condensers and separators.
- The duration time & temperature are critical to producing the greatest benefit. Young Living® documents every step for each batch of essential oil.

TESTING | NO COMPROMISE...

- Young Living® tests all incoming essential oils up to 17 times with multiple test to determine purity.
- Millions of dollars in equipment is used by our team of scientists to guarantee the best quality un-adulterated oils available.
- Third party testing in addition to in house testing.
- A **Certificate of Analysis** is created for every essential oil lot.

When you love something you nurture it so it can become the best it can be!
